

Director's Award for Excellence in Epidemiology and Public Health Response

This award is presented in recognition of significant contributions toward successful responses to public health emergencies (natural and manmade disasters, disease outbreaks, etc.). Nominees can include Field Epidemiology Training Programs or Field Epidemiology (Laboratory) Training Programs who have provided successful leadership in important public health responses while overcoming challenging circumstances. The award is also to recognize excellence in epidemiologic practice or research and contributions that address a public health issue of major importance by applying epidemiologic principles and methods. Nominations can recognize accomplishments that improved human health; made a substantial reduction in burden of disease; or represented innovations to public health practice based on epidemiologic foundations or implementation of epidemiologic approaches. Recognized contributions should be practical, explicit, and applied rather than theoretical or implicit.
