

## Key Components Checklist

This checklist contains an overview of agency practices involved in implementing each of the three STEPS to Care strategies and the tools that are designed to support them. Program Directors can use this checklist to determine if and how these activities align with what their agency is already doing and which tools they can use or adapt.

As the agency prepares for implementation, the checklist can be used to create a “training curriculum” for individual staff members. For example, Program Directors can place a checkmark next to the tools that a Patient Navigator should complete or read prior to meeting with clients, as well as a targeted completion date for each. Program Directors should meet at least once a month (more frequently at first) to discuss staff progress in using these tools.
