

## Demographics: Newborn Hearing Screening (2015)

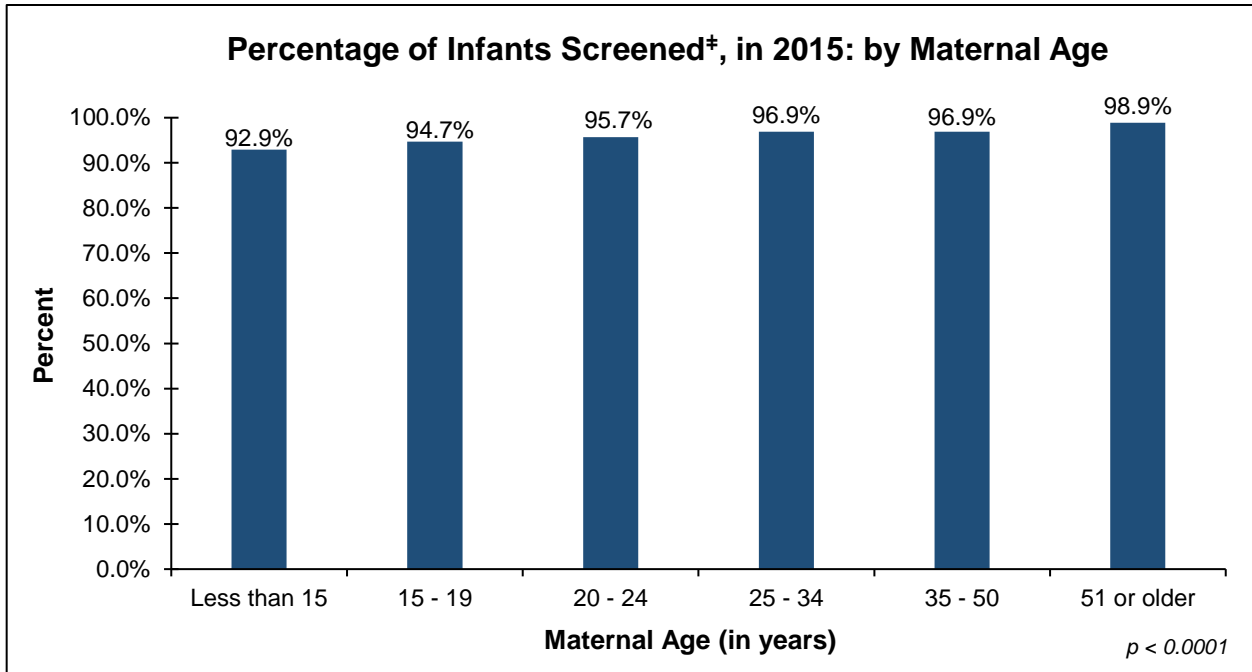

**Source:** 2015 CDC Hearing Screening and Follow-up Survey (HSFS)\*

*\*Each jurisdiction's submitted data underwent a cleaning and error check process. Jurisdictions reporting  $\geq 20\%$  of total screened infants in the "unknown" category, for each demographic variable, were excluded from this analysis.*

*\*Percentage of infants screened for each category is calculated among the total occurrent births (i.e.  $\% \text{ Males Screened} = ((\# \text{ Total Pass Screening:Male} + \text{Total Not Pass Screening:Male}) / \# \text{ Total Occurrent Births:Male}) * 100$ ). Test for significant difference between percentages was calculated using Pearson's chi-square test where  $\alpha = 0.05$  (Software: SAS 9.4, Cary, NC).*
