

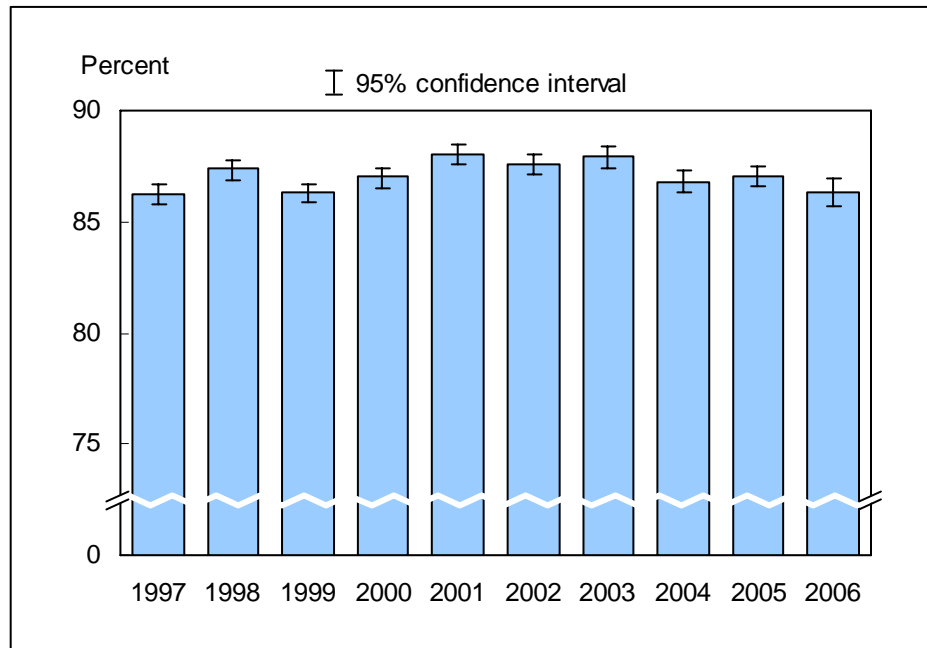

Figure 2.1. Percentage of persons of all ages with a usual place to go for medical care: United States, 1997–2006

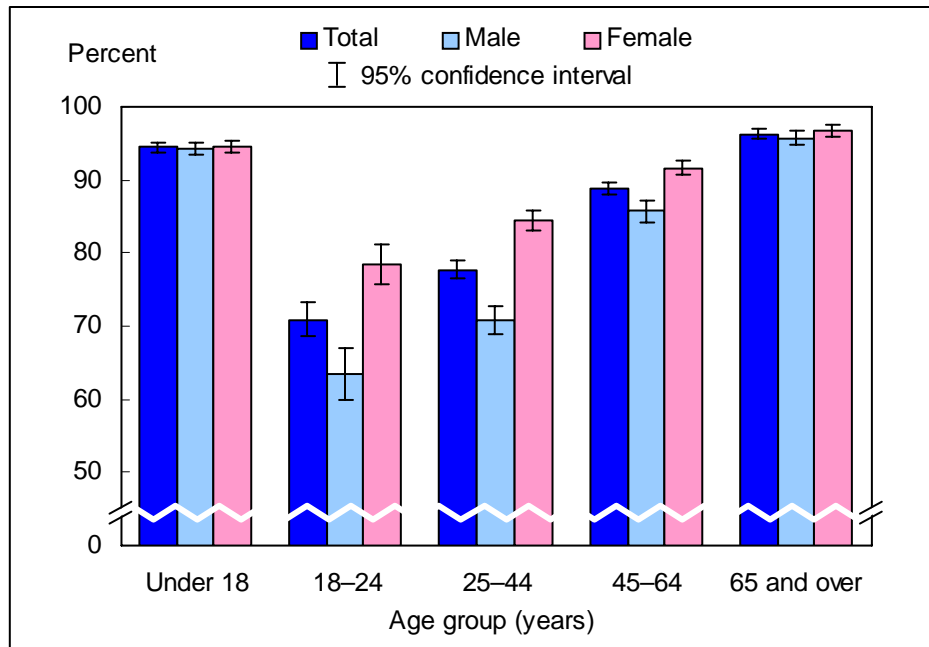

NOTES: The usual place to go for medical care does not include a hospital emergency room. The analyses excluded persons with an unknown usual place to go for medical care (about 0.6% of respondents each year). Beginning with the 2003 data, the National Health Interview Survey (NHIS) transitioned to weights derived from the 2000 census. In this Early Release, estimates for 2000–2002 were recalculated using weights derived from the 2000 census. See “About This Early Release” and Table III in the Appendix for more details.

DATA SOURCE: Combined Sample Adult and Sample Child Core components of the 1997–2006 NHIS. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

- In 2006, the percentage of persons who had a usual place to go for medical care was 86.3% (95% confidence interval = 85.68–86.92%), which was not significantly different from the 2005 estimate of 87.0%.
- The percentage of persons who had a usual place to go for medical care decreased from 87.9% in 2003 to 86.3% in 2006.

Figure 2.2. Percentage of persons of all ages with a usual place to go for medical care, by age group and sex: United States, 2006

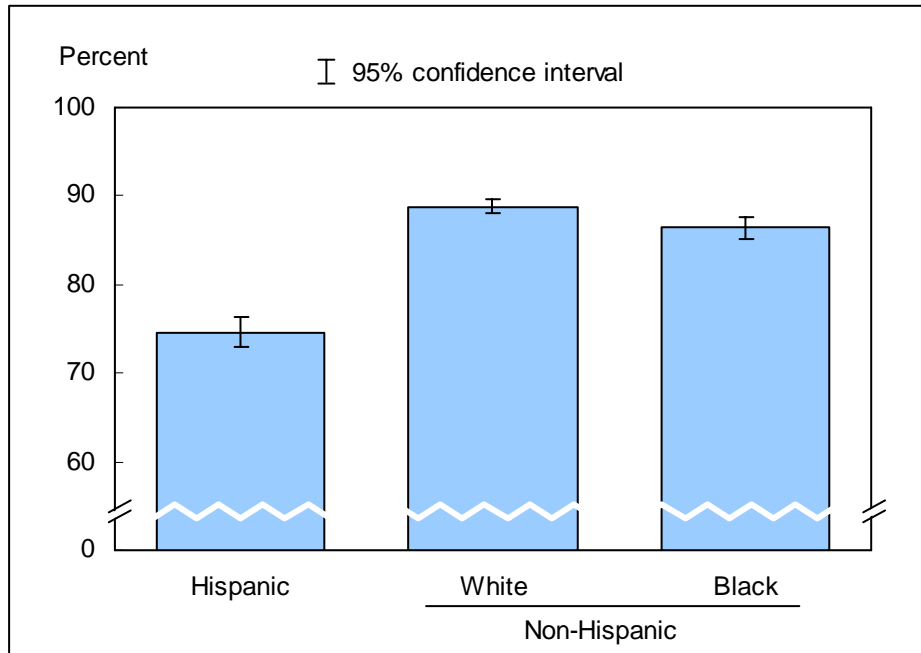

NOTES: The usual place to go for medical care does not include a hospital emergency room. The analyses excluded 222 persons (0.9%) with an unknown usual place to go for medical care.

DATA SOURCE: Sample Adult and Sample Child Core components of the 2006 National Health Interview Survey. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

- Of the five age groups, persons aged 18–24 years were least likely to have a usual place to go for medical care. Children under age 18 years were more likely than adults aged 18–64 years to have a usual place to go for medical care.
- Among those aged 18 years and over, the percentage of persons having a usual place to go for medical care increased with age.
- Among adults in the age groups 18–24 years, 25–44 years, and 45–64 years, men were less likely than women to have a usual place to go for medical care.

Figure 2.3. Age-sex-adjusted percentage of persons of all ages with a usual place to go for medical care, by race/ethnicity: United States, 2006

NOTES: The usual place to go for medical care does not include a hospital emergency room. The analyses excluded 222 persons (0.9%) with an unknown usual place to go for medical care. Estimates are age-sex adjusted using the projected 2000 U.S. population as the standard population and using five age groups: under 18 years, 18–24 years, 25–44 years, 45–64 years, and 65 years and over.

DATA SOURCE: Sample Adult and Sample Child Core components of the 2006 National Health Interview Survey. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

■ After adjusting for age and sex, the percentage of persons with a usual place to go for medical care was 74.6% for Hispanic persons, 88.8% for non-Hispanic white persons, and 86.4% for non-Hispanic black persons.

■ Of the three race/ethnicity groups, Hispanic persons were least likely to have a usual place to go for medical care.

Data tables for Figures 2.1–2.3:

Data table for Figure 2.1. Percentage of persons of all ages with a usual place to go for medical care: United States, 1997–2006

Year	Percent (95% confidence interval)	
	Crude ¹	Age-adjusted ²
1997	86.2 (85.8-86.7)	86.3 (85.9-86.7)
1998	87.4 (86.9-87.8)	87.4 (87.0-87.9)
1999	86.3 (85.9-86.7)	86.4 (86.0-86.8)
2000	87.0 (86.5-87.4)	87.0 (86.6-87.4)
2001	88.0 (87.6-88.5)	88.0 (87.6-88.5)
2002	87.6 (87.1-88.0)	87.6 (87.1-88.0)
2003	87.9 (87.4-88.4)	87.9 (87.4-88.4)
2004	86.8 (86.3-87.3)	86.8 (86.3-87.2)
2005	87.0 (86.56-87.50)	86.9 (86.47-87.41)
2006	86.3 (85.68-86.92)	86.2 (85.56-86.80)

¹Crude estimates are presented in the figure.

²Estimates for this Healthy People 2010 Leading Health Indicator are age adjusted using the projected 2000 U.S. population as the standard population and using five age groups: under 18 years, 18–24 years, 25–44 years, 45–64 years, and 65 years and over.
