

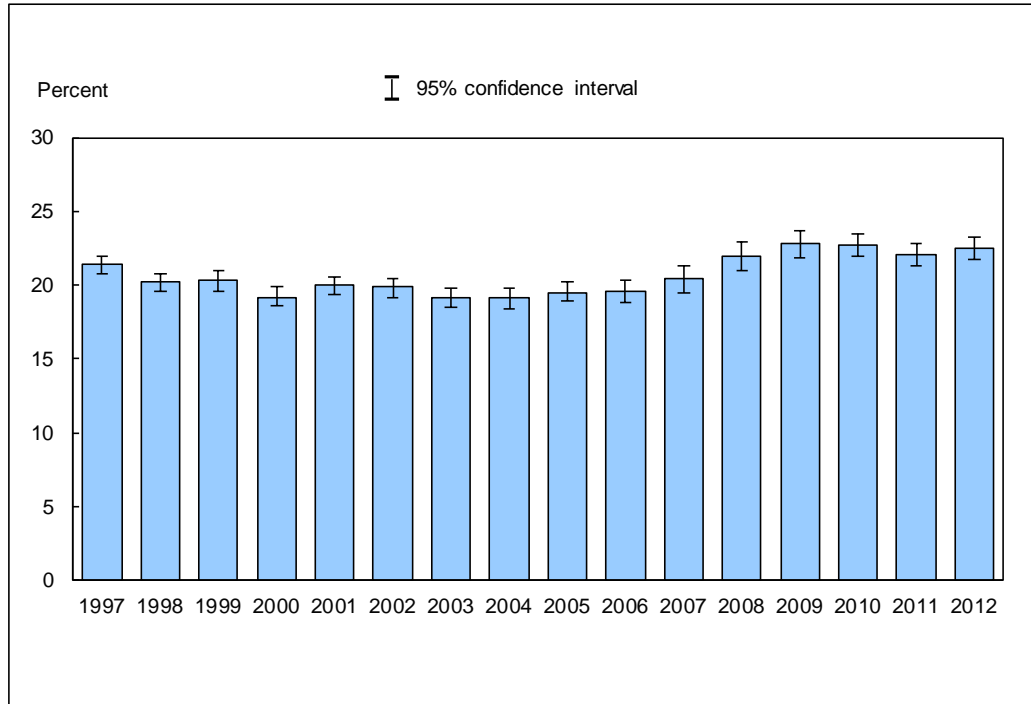

Figure 9.1. Percentage of adults aged 18 and over who had five or more drinks in 1 day at least once in the past year: United States, 1997–2012

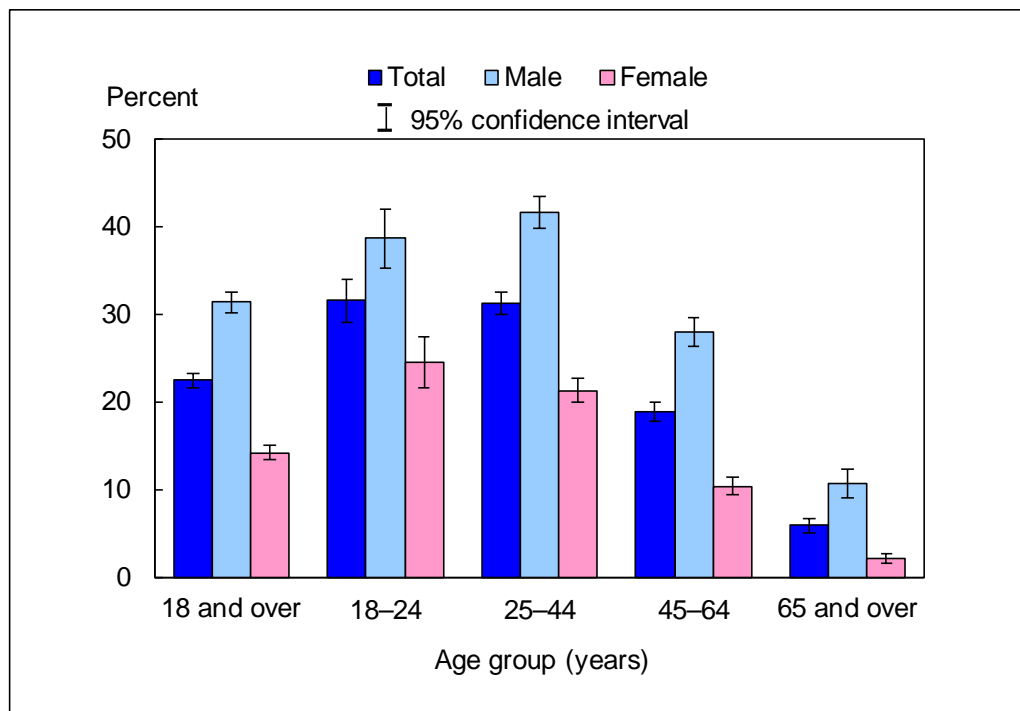

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 1997–2012, Sample Adult Core component.

- For 2012, the percentage of adults who had five or more drinks in 1 day at least once in the past year was 22.5% (95% confidence interval = 21.70%–23.23%), which was not significantly different from the 2011 estimate of 22.1%.
- The percentage of adults who had five or more drinks in 1 day at least once in the past year was lowest in 2003 and 2004 (19.1%) and highest in 2009 (22.8%).

NOTES: Data are based on household interviews of a sample of the civilian noninstitutionalized population. • The analyses excluded adults with unknown alcohol consumption (about 2% of respondents each year). • See [Technical Notes](#) for more details.

Figure 9.2. Percentage of adults aged 18 and over who had five or more drinks in 1 day at least once in the past year, by age group and sex: United States, 2012

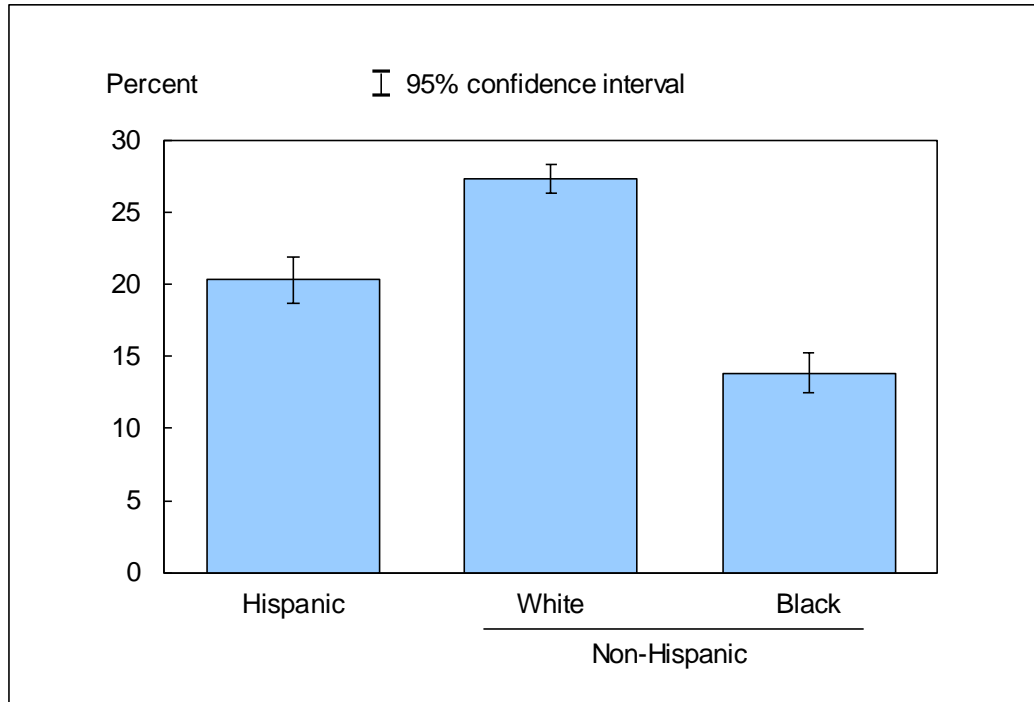

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2012, Sample Adult Core component.

- Among adults aged 25 and over, the percentages of women and men who had five or more drinks in 1 day at least once in the past year decreased with age.
- For all age groups, men were considerably more likely than women to have had five or more drinks in 1 day at least once in the past year.

NOTES: Data are based on household interviews of a sample of the civilian noninstitutionalized population. • The analyses excluded the 1.1% of adults with unknown alcohol consumption. • See [Technical Notes](#) for more details.

Figure 9.3. Age-sex-adjusted percentage of adults aged 18 and over who had five or more drinks in 1 day at least once in the past year, by race/ethnicity: United States, 2012

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2012, Sample Adult Core component.

- The age-sex-adjusted percentage of adults who had five or more drinks in 1 day at least once in the past year was 20.3% for Hispanic adults, 27.3% for non-Hispanic white adults, and 13.8% for non-Hispanic black adults.
- Non-Hispanic white adults were the most likely to have had five or more drinks in 1 day at least once in the past year, followed by Hispanic adults and non-Hispanic black adults.

NOTES: Data are based on household interviews of a sample of the civilian noninstitutionalized population. • The analyses excluded the 1.1% of adults with unknown alcohol consumption. • Estimates are age-sex adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 18–24, 25–44, 45–64, and 65 and over. • See [Technical Notes](#) for more details.

2012	22.5 (21.70-23.23)	23.3 (22.54-24.07)

¹Crude estimates are presented in the figure.

²Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 18–24, 25–44, 45–64, and 65 and over.

NOTES: Data are based on household interviews of a sample of the civilian noninstitutionalized population. Beginning with the 2012 data, the National Health Interview Survey transitioned to weights derived from the 2010 census. For 2003–2011 data, weights were derived from the 2000 census. In this Early Release, estimates for 2000–2002 were recalculated using weights derived from the 2000 census. For 1997–1999 data, weights were derived from the 1990 census.
