

Table 1-30. Central Birth Rates by Live-Birth Order, Current Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1896-1900 to 1979-83: United States, 1940-1998

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates for 1998 are averages of the rates per 1,000 women for single cohorts shown in table 1-34; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. For method of computation, see Technical Appendix. Data are by race of child. See Technical Appendix)

Current age of woman, cohort, and race of child	Calendar year	Total	Live-birth order							
			1	2	3	4	5	6	7	8 and over
