Subject: 103 - Endicott Report Comments

Name

Organization
daughter of a retired IBM Endicott employee who died of cancer

Email

Address

USA

Comments

I request to have my father's health/work record included in the feasibility study. He worked there from to He was a for most of his career, until the last years. As part of IBM's plan to downsize before he was eligible to retire, he was asked to work on shift as a employee (had to wear a brown suit/and ran some kind of process that signaled with a yellow light). I am still investigating what building number he was assigned to, I will try to find out. His cancer was first found to be in his liver with an unknown origin. After he died, the autopsy & death certificate stated it originated in the pancreas. I, along with my family, would like to have closure in regards to his premature death. Please advise if you need his name or any other personal information. Respectfully,
I will attend the meeting at Union-Endicott High School on Tues., April 17, 2007.
