Subject: IBM

Please have NIOSH a division of OSHA conduct a health study on IBM workers exposed to chemicals.

My neighbor . . . worked in the Endicott facility for . . . years and now in retirement suffers from . . . Every winter he gets bronchial problems.

When working for IBM he was told not to be concerned about not getting annual raises because remember "we will be taking care of you health wise the rest of you life". This, of course, is not true because we now pay for health care and it is poor coverage indeed.

My husband who worked as part of the . . . told me the fumes from the soldering machines were drawn across the floor before being taken out by the exhaust system . He developed . . . and now has acute adult on . . .

Anything you can do to help individuals get relief from their illness and health care costs will be appreciated.
