Recommendation 7: Implement Integrative and Interdisciplinary Approaches

Would like to see additional emphasis on tick-borne disease impacts to AGFF workers, family. While pesticide exposure and OTJ hazards should be paramount as they are in this document, additional effort needs to be expended on quality of life issues and the ability to sustain oneself in these arduous occupations when debilitated by tick-borne diseases. Moreover this research into this unique AGFF population could have major implications to the outdoor community in general.

Thank you.
