CBRN Standards Development

- Why Develop New Respirator Standards (NIOSH Role)
  - None Exist
  - New Technology – Hazards
  - New Technology – Applied to Respirators
- Respirator Standards for Terrorism Agents
  - Fit All 3 Criteria
- Existing NIOSH or Military Standards are not completely applicable to meet a terrorism agent threat

Use Conditions

A. Warm Use: Less than IDLH concentrations; sustained warm zone support operations; long term use for decon, traffic control, rehabilitation, rescue and recovery; hazard known & quantified.

B. Crisis Provision: Contingency use for short duration, above IDLH concentrations, high physiological (flow) demand. Contingency for unforeseen factors such as secondary device or pockets of entrapped hazard.

Interchangeability Concept

- Provision for Interchangeable Use of Consumable Filters
- Not Required but Requirements Identified
  - Optional for Manufacturers
- Considered Creative Alternatives Performance Based and Less Design Restrictive
  - Cumbersome to Implement in First Step Standard
- Utilize European Norms, EN 136 & EN 148
