### Comments

Thank you for the opportunity to review this document. I think the video is excellent. It is very easy to understand, and the slides are very comprehensive. This is a great feature as some slide presentations include more information shared by the narrator, and do not give the audience, in this case students, thorough information to take with them. The thoroughness of the slides allows students to really listen to the presentation and to not have to take copious notes.

I enjoyed reviewing the algorithms which are mentioned in the presentation, and I think that giving more examples of these, during the slide presentation, would be useful. This will stress how the assessment and directions provided by the algorithms will promote safer patient lifting and decreased worker injury.

Again, thank you for the opportunity to comment on this document.
