FOREWORD

Last year was one of the most extraordinary in our 31-year history. The attacks of September 11, as well as the subsequent anthrax events, highlighted the importance of worker safety and health, perhaps more so than any other time. NIOSH was challenged to address these emergencies while retaining focus on its core mission. These events emphasized the need for reliable data that is communicated clearly and effectively.

The research and communication products listed in this bibliography are the result of the outstanding efforts of NIOSH and its partners to produce good science that is usable by workers, employers, the public, and the occupational safety and health community. NIOSH remains dedicated to preventing work related injuries and disease and to meeting any new and future challenges. We hope you will have the opportunity to explore these products further.
