[INSERT ORGANIZATION NAME] supports CDC's *Get Ahead of Sepsis* educational effort

[INSERT CITY] [INSERT DATE] – In recognition of Sepsis Awareness Month, [NAME OF ORGANIZATION] joins the Centers for Disease Control and Prevention (CDC) in urging healthcare professionals, patients, and their families to [Get Ahead of Sepsis](#).

"We believe everyone should know the risks of sepsis, learn how to spot the signs and symptoms of possible sepsis, and know how to act fast if sepsis is suspected. It's especially important [INSERT TARGET AUDIENCE] recognize the critical role they play in infection prevention and sepsis recognition," said [ORGANIZATIONAL SPOKESPERSON]. "We're proud to be part of *Get Ahead of Sepsis* and its effort to make sure everyone knows how to recognize and prevent infections that can lead to this medical emergency."

Sepsis is the body's extreme response to an infection. It is a life-threatening medical emergency. Sepsis happens when an infection you already have triggers a chain reaction throughout your body. Infections that lead to sepsis most often start in the lung, urinary tract, skin, or gastrointestinal tract. Without timely treatment, sepsis can rapidly lead to tissue damage, organ failure, and death. Anyone can get an infection, and almost any infection can lead to sepsis.

CDC has [educational materials and resources](#), including fact sheets, brochures, and an educational video about "Four Ways to *Get Ahead of Sepsis*," for patients, families, and healthcare professionals.

Get Ahead of Sepsis helps educate consumers and healthcare professionals (HCPs) about the importance of early recognition and timely treatment of sepsis, reassessment of antibiotic needs, and prevention of infections. A person with sepsis might have one or more of the following signs or symptoms:

- Clammy or sweaty skin
- Confusion or disorientation
- Extreme pain or discomfort
- Fever, shivering, or feeling very cold
- High heart rate or weak pulse
- Shortness of breath

Healthcare professionals should immediately evaluate and treat people who might have sepsis.

CDC is asking healthcare professionals to get ahead of sepsis by knowing sepsis signs and symptoms to identify and treat patients early; acting fast if they suspect sepsis; and preventing infections and educating patients about infection prevention.

CDC is asking patients, families, and caregivers to talk to a healthcare professional about steps they can take to prevent infections that can lead to sepsis; practice good hygiene; know the signs and symptoms of sepsis; and act fast if they or their loved ones have an infection that's not getting better or is getting worse. Get medical care immediately. Ask a healthcare professional, "Could this infection be leading to sepsis?" and if they should go to the emergency room.

Visit the *Get Ahead of Sepsis* website for more information: www.cdc.gov/sepsis.
